

Design Patterns - Filter Pattern

Filter pattern or Criteria pattern is a design pattern that enables developers to filter a set of objects using different criteria and chaining them in a decoupled way through logical operations. This type of design pattern comes under structural pattern as this pattern combines multiple criteria to obtain single criteria.

Implementation

We're going to create a *Person* object, *Criteria* interface and concrete classes implementing this interface to filter list of *Person* objects. *CriteriaPatternDemo*, our demo class uses *Criteria* objects to filter List of *Person* objects based on various criteria and their combinations.

Step 1

Create a class on which criteria is to be applied.

Person.java

```
public class Person {

    private String name;
    private String gender;
    private String maritalStatus;

    public Person(String name, String gender, String maritalStatus){
```

```
    this.name = name;
    this.gender = gender;
    this.maritalStatus = maritalStatus;
}

public String getName() {
    return name;
}
public String getGender() {
    return gender;
}
public String getMaritalStatus() {
    return maritalStatus;
}
}
```

Step 2

Create an interface for Criteria.

Criteria.java

```
import java.util.List;

public interface Criteria {
    public List<Person> meetCriteria(List<Person> persons);
}
```

Step 3

Create concrete classes implementing the *Criteria* interface.

CriteriaMale.java

```
import java.util.ArrayList;
import java.util.List;

public class CriteriaMale implements Criteria {

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> malePersons = new ArrayList<Person>();

        for (Person person : persons) {
            if(person.getGender().equalsIgnoreCase("MALE")){
                malePersons.add(person);
            }
        }
        return malePersons;
    }
}
```

CriteriaFemale.java

```
import java.util.ArrayList;
import java.util.List;

public class CriteriaFemale implements Criteria {

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> femalePersons = new ArrayList<Person>();

        for (Person person : persons) {
            if(person.getGender().equalsIgnoreCase("FEMALE")){
                femalePersons.add(person);
            }
        }
    }
}
```

```
    }  
    return femalePersons;  
}  
}
```

CriteriaSingle.java

```
import java.util.ArrayList;  
import java.util.List;  
  
public class CriteriaSingle implements Criteria {  
  
    @Override  
    public List<Person> meetCriteria(List<Person> persons) {  
        List<Person> singlePersons = new ArrayList<Person>();  
  
        for (Person person : persons) {  
            if(person.getMaritalStatus().equalsIgnoreCase("SINGLE")){  
                singlePersons.add(person);  
            }  
        }  
        return singlePersons;  
    }  
}
```

AndCriteria.java

```
import java.util.List;  
  
public class AndCriteria implements Criteria {  
  
    private Criteria criteria;  
    private Criteria otherCriteria;
```

```

public AndCriteria(Criteria criteria, Criteria otherCriteria) {
    this.criteria = criteria;
    this.otherCriteria = otherCriteria;
}

@Override
public List<Person> meetCriteria(List<Person> persons) {

    List<Person> firstCriteriaPersons = criteria.meetCriteria(persons);
    return otherCriteria.meetCriteria(firstCriteriaPersons);
}
}

```

OrCriteria.java

```

import java.util.List;

public class OrCriteria implements Criteria {

    private Criteria criteria;
    private Criteria otherCriteria;

    public OrCriteria(Criteria criteria, Criteria otherCriteria) {
        this.criteria = criteria;
        this.otherCriteria = otherCriteria;
    }

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> firstCriteriaItems = criteria.meetCriteria(persons);
        List<Person> otherCriteriaItems = otherCriteria.meetCriteria(persons);

        for (Person person : otherCriteriaItems) {
            if(!firstCriteriaItems.contains(person)){

```

```

        firstCriteriaItems.add(person);
    }
}
return firstCriteriaItems;
}
}

```

Step4

Use different Criteria and their combination to filter out persons.

CriteriaPatternDemo.java

```

import java.util.ArrayList;
import java.util.List;

public class CriteriaPatternDemo {
    public static void main(String[] args) {
        List<Person> persons = new ArrayList<Person>();

        persons.add(new Person("Robert", "Male", "Single"));
        persons.add(new Person("John", "Male", "Married"));

        persons.add(new Person("Laura", "Female", "Married"));
        persons.add(new Person("Diana", "Female", "Single"));
        persons.add(new Person("Mike", "Male", "Single"));
        persons.add(new Person("Bobby", "Male", "Single"));

        Criteria male = new CriteriaMale();
        Criteria female = new CriteriaFemale();
        Criteria single = new CriteriaSingle();
        Criteria singleMale = new AndCriteria(single, male);
        Criteria singleOrFemale = new OrCriteria(single, female);

        System.out.println("Males: ");
    }
}

```

```

        printPersons(male.meetCriteria(persons));

        System.out.println("\nFemales: ");
        printPersons(female.meetCriteria(persons));

        System.out.println("\nSingle Males: ");
        printPersons(singleMale.meetCriteria(persons));

        System.out.println("\nSingle Or Females: ");
        printPersons(singleOrFemale.meetCriteria(persons));
    }

    public static void printPersons(List<Person> persons){

        for (Person person : persons) {
            System.out.println("Person : [ Name : " + person.getName() + ", Gender : " + person.getGender() + ", Marital St
        }
    }
}

```

Step 5

Verify the output.

```

Males:
Person : [ Name : Robert, Gender : Male, Marital Status : Single ]
Person : [ Name : John, Gender : Male, Marital Status : Married ]
Person : [ Name : Mike, Gender : Male, Marital Status : Single ]
Person : [ Name : Bobby, Gender : Male, Marital Status : Single ]

Females:
Person : [ Name : Laura, Gender : Female, Marital Status : Married ]

```

Person : [Name : Diana, Gender : Female, Marital Status : Single]

Single Males:

Person : [Name : Robert, Gender : Male, Marital Status : Single]

Person : [Name : Mike, Gender : Male, Marital Status : Single]

Person : [Name : Bobby, Gender : Male, Marital Status : Single]

Single Or Females:

Person : [Name : Robert, Gender : Male, Marital Status : Single]

Person : [Name : Diana, Gender : Female, Marital Status : Single]

Person : [Name : Mike, Gender : Male, Marital Status : Single]

Person : [Name : Bobby, Gender : Male, Marital Status : Single]

Person : [Name : Laura, Gender : Female, Marital Status : Married]
